The 2016 New Year brings with it the Mobile Solutions® Smartphone App

Elliott's Mobile Solutions® smartphone application has been released and is available for download on the Google Play Store and the Apple App Store. This solution has taken the basic functionality of Elliott's Emergency Event Manager Software such as personnel data management and event tracking, and put it into the smartphone application platform to support greater user mobility.

St. Louis, MO January 5, 2016 – Elliott Data Systems, Inc., developer and integration expert of Mobile Solutions® Identification and Accountability Solutions, announced today that its new **Mobile Solutions® Application** has been released and is available for download on Android's Google™ Play store and Apple's App Store. Emergency first response organizations can track and manage personnel data at an incident scene using the Mobile Solutions® App while working in sync with the Command Center established onsite. This provides first responders the opportunity to manage personnel and volunteers while moving in and out of zones using just their smartphone.

The Mobile Solutions® App's ability to work on- or off-line and with multiple wireless internet options, including long-range connectivity via cell towers, makes it a more advanced mobile solution compared to other handheld devices. The Mobile Solutions® App is not only compatible with **Android** and **Apple IOS** operating systems, but can be integrated with a more ruggedized, enterprise grade device such as the Janam XT1 for a higher level of quality that meets government requirements such as **IP54 standards**.

With the **Mobile Solutions® App**, first responders can perform on-site tracking anywhere at an incident scene and:
- Begin managing an incident within seconds of arrival.
- Functional in a communication out environment.
- Enroll personnel into an event.
- Create assignments for first responders.
- Verify responder certifications.
- Check personnel in and out.
- Check event status at any time.
- View first responders' personal assets available.

This application was designed based on the complete Mobile Solutions® **Emergency Event Manager Software (EEMS)** used by EMA's across the nation to perform accountability management. This application is fully functional with access to securely protected data when using Elliott's consecutive licensing. While a Mobile Command Case System is commonly used onsite at emergency scenes to serve as a Command Center, the addition of the Mobile Solutions® App provides first responders a more versatile mobile device to use as an extension of their command center by sharing data in real time if feasible and off-line when necessary.

"The release of this app extends the functionality of our suite of products to hardware you already have and gives us a building block for some exciting technology to come."
Josh Dunbar, Vice President of Elliott Data Systems, Inc.

Elliott Data Systems, Inc. is a Mobile Solutions® systems developer and integrator with expertise in deployment of mobile security, positive ID and accountability solutions. Elliott Data Systems, Inc. is partnered with a national network of ISG (Identification Systems Group) dealerships that are trained and certified to sell and support Mobile Solutions® product offered by Elliott.
